Would large rocks in the median cause more damage to a vehicle and to the driver's health and safety if they hit it?

We were coming home from diner this evening and noticed police lights flashing down Manchester just east of Emerson Ave. We drove be to see what was going no.

I said to Gail I hope no one ran over our newly planted trees. There was a car parked on the median stopping short of the street light. From what I could tell all trees were still standing.

Maybe we should have very large rocks haled it and place in the medians both on Sepulveda and Manchester. That would stop the car short of running over the trees.

I think the City should able to collect funding from the person or persons who destroy public property to pay for the repairs. That should be part of the insurance clam.

I will check tomorrow to see if we are OK with the trees.

John
